

STANDARDIZED PALLETIZING CELL

The heart of this cell is a strong, fast, and reliable Comau NJ40-2.5 robot capable of lifting up to 40 kg and reaching 2.5 meters.

The FlexLink WL626 conveyor brings your product into the cell and can move up to a 626mm wide box/product.

The Titan discharge conveyors are rated at 2000lbs and can be upgraded if needed. They discharge the stacked pallet completely out of the enclosed cell for operator safety.

We can tailor this basic design to your specific requirements, or incorporate a complete, custom solution.
